

Ransomware Is EVERYWHERE

Protect Your Organization From Becoming Its Next Victim

Watch or read the news today and Ransomware is everywhere. Cyber attacks targeting schools alone has risen significantly - up almost 20% - since the beginning of the Covid-19 pandemic, according to industry reports.

Cyber criminals have gotten more clever at stepping up Ransomware attacks, often launching attacks similar to the one that shut down the Colonial Pipeline.

To protect your organization and your users from the spread of ransomware, it is essential to enact the following steps:

- **Create a human firewall** through cyber security awareness training
- Ensure you have **next generation endpoint protection** across your environment
- Make sure you have **extra layers of email security** implemented
- **Monitor your servers, networks, and back up key systems**

HUB Tech can help your organization adopt a layered security strategy. Our solution can be rolled out immediately to **Prevent, Detect, and Respond** to threats to your network.

HUB Tech makes it easy to engage with a Security Consultant to schedule a No Cost Preliminary Security Assessment. We will review your security posture and provide recommendations on additional security layers.
